Circumference

The circumference $circ(G)$ is the length of a longest cycle.

Hamiltonicity

A graph G is hamiltonian if $circ(G) = |V(G)|$.

Hamiltonicity of classes of graphs

- Tait conjectured in 1884 that every cubic polyhedron is hamiltonian.
- The conjecture became famous because it implied the Four Colour Theorem (at that time still the Four Colour Problem)

Hamiltonicity of classes of graphs

The first to construct a counterexample was Tutte in 1946

Introduction Cyclically 4-edge-connected Future work Definitions Known results

Hamiltonicity of classes of graphs

Theorem (Tutte, 1956)
Every 4-connected polyhedron is hamiltonian.

Introduction Cyclically 4-edge-connected Future work Definitions Known results

Shortness coefficient

The **shortness coefficient** of \mathcal{G} is defined as

$$\rho(\mathcal{G}) = \liminf_{G \in \mathcal{G}} \frac{\text{circ}(G)}{|V(G)|}$$

with \liminf taken over all sequences of graphs G_n in \mathcal{G} such that $|V(G_n)| \rightarrow \infty$ for $n \rightarrow \infty$.

On-Hei S. Lo, Jens M. Schmidt, Nico Van Cleemput, Carol T. Zamfirescu Shortness coefficient of cyclically 4-edge-connected cubic graphs 9

Shortness coefficient

$$\rho(\mathcal{G}) = \liminf_{G \in \mathcal{G}} \frac{\text{circ}(G)}{|V(G)|}$$

- $0 \leq \rho(\mathcal{G}) \leq 1$
- every graph in \mathcal{G} is hamiltonian $\Rightarrow \rho(\mathcal{G}) = 1$

Known results

Theorem (Moon and Moser, 1963)

The shortness coefficient of the class of 3-connected planar graphs is 0.

Theorem (Tutte, 1956)

The shortness coefficient of the class of 4-connected planar graphs is 1.

Known results

Theorem (Bondy and Simonovits, 1980)

The shortness coefficient of the class of 3-connected cubic graphs is 0.

Theorem (Walther, 1969)

The shortness coefficient of the class of 3-connected cubic planar graphs is 0.

Cyclically k -edge-connected

A graph G is cyclically k -edge-connected if for every edge-cut S of G with less than k edges at most one component of $G - S$ contains a cycle.

Cyclically k -edge-connected

- For $k \in \{1, 2, 3\}$ being cyclically k -edge-connected and being k -connected are equivalent for cubic graphs.
- CK is the class of cyclically k -edge-connected cubic graphs.
- CKP is the class of cyclically k -edge-connected planar cubic graphs.

Known bounds

$$circ(G) \geq \frac{3}{4} |V(G)|$$

Increasing the genus

Theorem (Lo, Schmidt, VC, and Zamfirescu)

For every $g \geq 0$ and for every $\ell \geq 23$, the shortness coefficient of the class of cyclically 4-edge-connected cubic graphs of genus g with faces of length at most ℓ is at most $\frac{45}{4\ell}$.

Increasing the genus

General cubic graphs

Theorem (Lo, Schmidt, VC, and Zamfirescu)

Let G be a cyclically 4-edge-connected cubic graph on n vertices.

Then $\rho(C4) \leq \frac{\text{circ}(G) - 2}{n - 2}$, and if there exist adjacent vertices v, w in

G such that $G - v - w$ is planar, then $\rho(C4P) \leq \frac{\text{circ}(G) - 2}{n - 2}$.

Corollary

$\rho(C4) \leq \frac{7}{8}$ and $\rho(C4P) \leq \frac{39}{40}$.

Future work

- $\frac{3}{4} \leq \rho(C4P) \leq \frac{37}{36}$
 - shrink the gap
 - fragments are smallest possible
 - missing more vertices
- quartic graphs?
- quintic graphs?
